SUMMARY

Mid-level full stack developer (Node.js, NestJS, TypeScript, React) with 4+ years in production financial systems: billing, cost allocation and payments via card, boleto and Pix (Brazilian payment methods). Cut billing query time by 67% at IATec, integrated 3 payment gateways at an education fintech, and now deliver websites and APIs as a freelancer. Seeking a mid-level role with Node.js and NestJS.

TECHNICAL SKILLS

- **Back-end:** Node.js, NestJS, TypeScript (core), Express, Hono, Prisma, Zod, REST APIs, JWT, OAuth2, Vitest, microservices, messaging (SQS) · PHP 8, Laravel (previous experience)
- **Front-end:** React, Next.js
- **Databases:** PostgreSQL, SQL Server, MySQL — data modeling, indexing and query optimization
- **Cloud & DevOps:** AWS (S3, SQS, Lambda, SES, CDK), serverless, Redis, Docker, GitHub Actions (CI/CD), Terraform
- **Integrations:** Payment gateways (ASAAS, Getnet, Stone), Pix, Resend, Clerk, RD Station, Azure DevOps
- **Other:** AI-assisted development (Claude Code, MCP), Clean Code, SOLID, LGPD, Datadog (APM), Scrum/Kanban

PROFESSIONAL EXPERIENCE

Freelancer (Self-employed) — Full Stack Developer 12/2025 – present
Event-website platform (fawedding.com.br) · Node.js, TypeScript, Hono, Prisma, PostgreSQL, React

- Built and maintain an event-website platform with 4 clients in production: weddings (RSVP, gift registry), a birthday (Pix, gift registry) and the Vocal Livre tour landing page (lead capture in Neon + RD Station); ~200 RSVPs processed
- Own the stack end to end: each event's website (React), the API (Prisma, PostgreSQL/Neon, JWT) and an admin dashboard with login to manage guests and gifts
- Replaced a serverless messaging flow (AWS SQS → Lambda → SES, CDK) with Resend, cutting cost and infrastructure
- Build new APIs with NestJS, Prisma and Zod, applying Clean Code, SOLID, and unit and integration tests (Vitest)

IATec — Mid-level Systems Developer 04/2023 – 11/2025
Adventist Institute of Technology (rehired) · PHP 8, Laravel, SQL, AWS S3

- Cut the main billing queries by 67% (90s → 30s) by rewriting SQL and adding indexes
- Restructured billing and PDF generation, reducing total time from over 5 min to about 2 min (-60%)
- Evolved the cost-allocation system across projects, products and entities that feeds the organization's billing
- Automated billing with export to the accounting system and document storage on AWS S3
- Co-built from scratch two internal enterprise systems (contract management and license distribution)
- Led code reviews and pair programming as a technical reference, in Scrum/Kanban with the Product Owner

YouPay — Mid-level Systems Developer 09/2022 – 03/2023
Education payments startup · PHP, REST APIs, microservices

- Built the core billing APIs of a payments platform used by about 15 schools
- Integrated 3 payment gateways (ASAAS, Getnet and Stone) in microservices and built delinquency tracking for schools

IATec — Intern / Trainee Developer 02/2021 – 08/2022
Adventist Institute of Technology · PHP, Laravel

- Started maintaining legacy PHP systems and was promoted to trainee in 8 months

PROJECTS

events-api — Multi-tenant SaaS API for group schedules (in development) · *NestJS, Prisma* · *github.com/penteado40/events-api*

- Clean Architecture, pragmatic DDD and SOLID in NestJS: layers enforced by lint, 20 ADRs documenting decisions
- 183 unit tests plus integration tests (Postgres); CI with migration checks and secret scanning; Redis (Upstash) rate limit

inventory-api — Multi-tenant inventory REST API · *TypeScript, Hono, Prisma · github.com/penteado40/inventory-api*

- Per-store isolation, Decimal monetary values and Zod validation; built with Claude Code and a custom MCP server

EDUCATION

- **B.Sc. in Information Systems** — Cruzeiro do Sul University (distance learning), expected 12/2026
- **Technical Diploma in IT** — UNASP-HT, completed 2019
